

PLUTO

RFID Starter Software

Get started with RFID!

■ Tag your goods and get a quick and accurate identification

■ Locate your goods via a practical search function

■ Keep the overview: scan your goods and export the collected data

■ Build up RFID knowledge as you go along

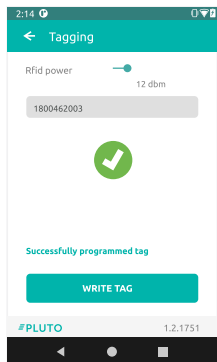

PLUTO RFID Starter Software

A set of basic functionalities on an RFID handheld scanner offers you a practical introduction to the benefits of RFID technology.

PLUTO RFID Starter Software

introduces you to the world of RFID technology. All you need is an RFID handheld scanner with software and RFID tags to quickly and accurately identify and locate your goods.

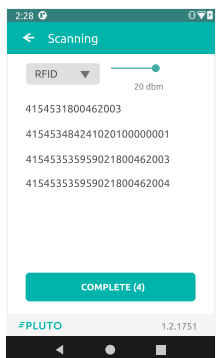

How does it work?

Tag

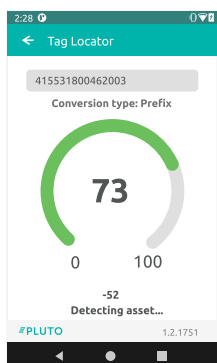

You use the RFID handheld scanner to programme an RFID tag to contain the unique information about your product. You can enter the data manually or you scan a barcode and programme it into the RFID tag. You then apply the RFID tag to your product.

PLUTO also offers the option of converting GS1 EPC to GS1 Barcode.

Scan

You can quickly scan tagged goods with the RFID handheld scanner. The information is read and stored. The use of filters enables to convert the stored data to a local file (.csv) or forward it to a REST API or a message queue.

Locate

You can also use the RFID handheld scanner to search for your tagged goods. You select a tag and an audio-visual signal indicates the degree of your proximity to the tag (and thus to your product).

What do you need?

RFID tags

There are numerous RFID tags available in different shapes, sizes and designs. It is crucial to select the right labels or tags for the proper functioning of the RFID system in your business environment. Aucxis can advise you on this.

RFID handheld scanner with PLUTO software

The PLUTO software developed by Aucxis is installed on an RFID handheld scanner and configured to your specific application.

Extend with POLARIS

RFID Asset Management Software

If your needs grow and you wish to organise the management of your assets with RFID, you can use our POLARIS Asset Management Software. This package takes you a step further by offering features to identify, move and track assets. It also includes a convenient website with additional overviews and reports and efficient data exchange to your business applications.
