

# BUSINESS ANALYSIS

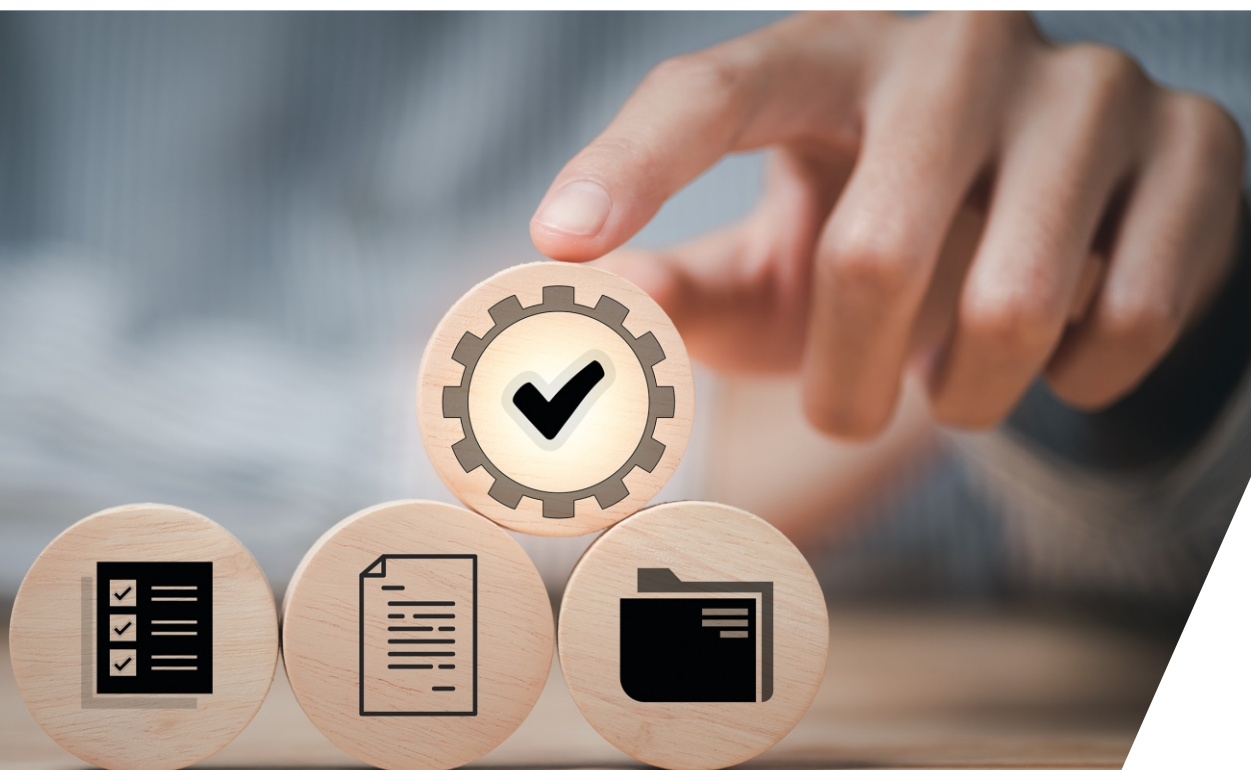

**Gain a clear insight into your expectations and the technical possibilities of your RFID project**

If you are considering implementing RFID to optimise your business processes, Aucxis can assist you by conducting a business analysis. Our focus is on **understanding your business needs and identifying the right solutions to achieve your objectives.**

You will obtain the necessary information and insights to make well-informed decisions about your planned investment.

Our business analysis provides a clear and concise conceptual overview, aimed at eliminating any ambiguities. This allows us to precisely define your project expectations.

While this analysis can be in-depth, it is not equivalent to a comprehensive functional design. Instead, it serves as **a crucial step toward clarifying the project concept.**

## The business analysis covers the following aspects of your RFID project:

### Problem definition

We summarise the problems that need to be tackled by means of RFID and define the objectives to be achieved.

### RFID solution

We describe, without delving into technical details, the solutions we can offer and present an architectural overview and a brief summary of the hardware requirements.

### Scope

We clearly define the scope of the RFID solution, which is divided into processes. This includes a clear definition of what falls within and outside the boundaries of the future project. In order to ensure a successful outcome, we also specify the responsibilities of both Aucxis and the customer within the project.

### Process description

For each process within the scope, we provide a brief description of its functionality. We go through this description together with you and, where applicable, with other technical parties involved in the project.

Additionally, a functional analysis phase may be required, during which a document with the functionalities of the RFID system is elaborated. This document is not part of the business analysis but is created during the actual project implementation.

## Contact us for an exploratory discussion and quotation!

### Proof of Concept

During the business analysis, it may be found that on-site tests are necessary to address technical challenges. In this case, the POC team will come on site to install the required hardware and test software. Through realistic simulations, we test whether the proposed RFID solution works and identify the specifications and functionalities that need to be taken into account. A separate quotation will be provided for the POC and the results report.

### Without obligation

Conducting the business analysis does not oblige you to proceed with the project or to choose Aucxis as your RFID integrator.

**AUCXIS**

## Why choose Aucxis?

- Experienced RFID integrator
- Extensive know-how
- One supplier, all products, all services
- In-house experts in hardware, software development and installation
- Numerous realisations in various sectors
- ISO9001-certified company
- Support service 24/7
